

# Is your child age 5-11 allergic to dust MITES?

If so, participation in our research study  
may be an option for your family.

The investigational medication being  
studied is a sublingual (under the tongue)  
immunotherapy tablet that is taken daily. The  
tablet dissolves rapidly under the tongue.

There is no charge to participate in  
this study, and compensation for study  
related travel expenses is available to  
those who qualify for participation.

To join our research study, potential participants must:

- be 5 to 11 years old
- have been diagnosed with dust mite allergies for at least 1 year
- Have allergic symptoms despite taking allergy medications in the past year

Other requirements apply.

TO SEE IF OUR STUDY MIGHT BE RIGHT FOR  
YOUR FAMILY, PLEASE CONTACT US TODAY.
